

# Docu*ment*encoreVXP™

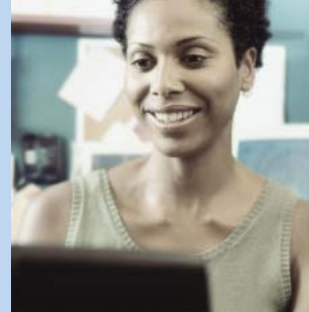

Improve document workflow and management.

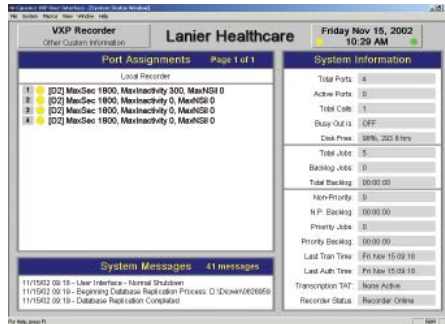

- > **Dictate anywhere**  
Dictate and receive digital voice with ease from any location, station, PC, telephone or portable dictation device.
- > **EX Station compatibility**  
Provides robust compatibility with the popular VoiceWrite EX Station, the only digital dictation station available for over a decade.
- > **High availability**  
The VXP High Availability Module provides voice and data redundancy across multiple production servers without requiring the expense of back-up systems.
- > **Personal profiling means**  
customized workflow  
Powerful macro scripting language offers individual customization based on personal preferences and workflow requirements. Add software modules based on your organization's needs.
- > **Secure access**  
Up to 10 levels of user-defined security provides an electronic audit trail, hacker alerts and automatic disabling functions.
- > **Improve productivity**  
Provides a wide range of management tracking, audit information and reporting capabilities.
- > **Lower costs**  
Leverage current investments. VXP clients can be deployed on most existing hardware.
- > **Service and support**  
Depend on Lanier Healthcare's Service team, 24 hours a day, 7 days a week, to assist with any product support needs or questions.

VXP is a state-of-the-art digital dictation and document workflow system. Its scalability and open architecture allow for a seamless integration and shorter implementation period. Users can take advantage of a variety of flexible dictation input options, such as the industry-leading Lanier Healthcare VoiceWrite EX Station. The EX Station has a convenient design and unparalleled performance standards, and has proven to be the most popular input station in the industry. Programmable function keys, automatic data re-entry and barcoding capabilities increase user productivity and facilitate improved turnaround times.

Running on the Windows® 2000 platform, VXP provides greater control over deadlines, data security, turnaround time, report management and virtual workflow. It allows for the delivery of transcription files anywhere in the world via the Internet and eliminates the need for a dedicated phone line. Trust VXP to be your ideal dictation and workflow solution.

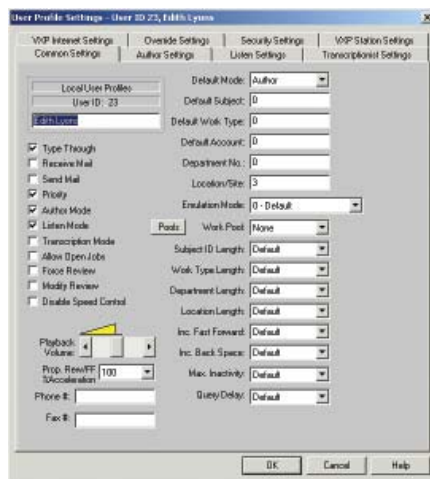

## Screen shot 1: VXP Manager – System Status Window

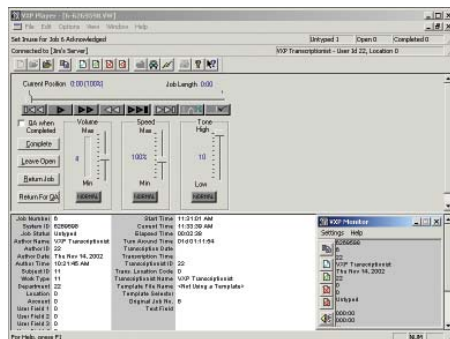

VXP Manager is the nerve center of the VXP system. It allows administrators to manage users, documents and overall workflow, and enables complete customization of the workflow and user interactivity. VXP Manager may be distributed to as many client systems as desired and, based on permissions, allows individuals in remote locations to view and affect system activity and performance. The user interface provides user-friendly functionality and keyboard shortcuts to maximize productivity and efficiency. Powerful document searches and on-the-fly document queuing allow documents to be easily searched by a combination of demographic values and queued to an available transcriptionist. Available at-a-glance, the system statistics and dynamic port display allow vital document, user and system information to be clearly displayed.

## Screen shot 2: User Preferences Dialog

VXP offers unparalleled customization capabilities. VXP provides a customized and extremely powerful macro scripting language, which gives it the most flexibility of any dictation solution on the market today. Simply stated, it adheres to your workflow. Off the shelf, VXP is capable of customizing user settings such as field defaults, routing behavior and login security. It can be configured to emulate any of your existing dictation input options. Because of this highly scalable and customizable resource, VXP is capable of adapting to unusual workflow requirements, end-user functionality and system emulation. It even supports robust uploading and offloading to support outsourcing requirements.

## Screen shot 3: VXP Player

VXP delivers efficient and accessible transcription options. VXP Player is a PC-based, Web-enabled application that delivers both voice and demographics data to a transcriptionist workstation. Because VXP documents can be delivered anywhere in the world via the Internet, transcription can be accomplished anywhere, anytime. And since VXP employs TCP/IP transmissions, the security of your documents is further protected from compromise. Furthermore, the use of an ISP for delivery promises a low-cost alternative to historically expensive long-distance phone bills. As an added benefit, Player is integrated into Microsoft® Word through the use of templates to better facilitate transcription. And if an adequate network connection is not available to transcriptionists, VXP also provides telephony-based stations, which utilize phone lines to communicate vital information to transcriptionists. Overall, VXP Player provides for the unlimited dispersion of transcription resources.
