

SpeechQ™

The powerful speech recognition tool that works the way you do.

A key component of our revolutionary DocQment Enterprise Platform™ (EP), SpeechQ speech recognition system is efficient and cost-effective in a number of important ways:

- > Reduces medical transcription costs by eliminating or reducing keystrokes
- > Increases transcription productivity up to 30% by increasing output and easing staffing constraints
- > Expedites report turnaround time while improving accessibility and management
- > Enhances patient care by improving the creation and accessibility of medical records
- > Eliminates the physician training required to implement speech recognition

Most importantly, SpeechQ is compatible with dictation systems, hand-held dictation devices and standard telephones, which means it will enhance physician productivity without changing the way they work.

SpeechQ is based on the industry-leading Philips SpeechMagic™ technology. This Internet-hosted, speech recognition technology is quick and easy to deploy and requires little maintenance, training or complex installations.

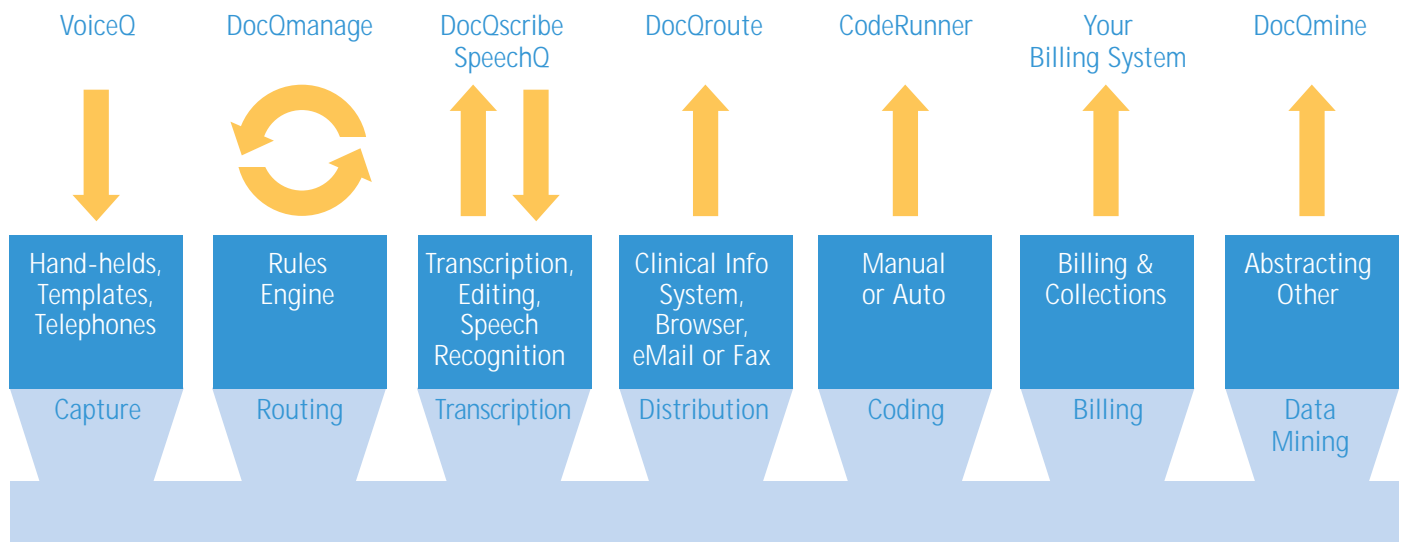

How does SpeechQ work?

DocQment EP's powerful workflow technology routes dictation through the SpeechQ recognition engine and delivers the original audio file, along with the recognized text file, to the transcriptionist/editor. The audio and text files are linked using Philips' patented synchronized playback process.

Using DocQment EP's powerful text editor, DocQscribe™, the transcriptionist/editor corrects any errors in the speech recognized text file while listening to the synchronized audio file. Once the transcriptionist/editor edits a document, it can be imported through the system for review and printed or uploaded into an organization's health information system.

DocQment Enterprise Platform

Implement SpeechQ in your operation and see how it:

- > Provides significant, measurable savings that increase with use
- > Integrates with existing systems with minimal disruption to daily operations
- > Suppresses hesitations, silences and noise disturbances that lead to unnecessary edits
- > Creates all punctuation in the text document
- > Performs automatic grammar corrections

For more information on SpeechQ or any other MedQuist products supported on the DocQment Enterprise Platform, call 866-856-3000 or visit us at www.medquist.com.
